

# METTLER TOLEDO Product Inspection Express

## We'll Drive Right To Your Door!

The **METTLER TOLEDO Product Inspection Express** provides a convenient hands-on training opportunity for processors and packagers to gain specific knowledge about how to limit product waste and contamination in their plants. Staffed by a technical trainer, the bus features working metal detectors, x-ray inspection systems and checkweighers, offering interactive machine and product testing demonstrations.

### Safeline Metal Detectors

The multiple-frequency **PowerPhasePRO** metal detector with a color touch-screen interface features one pass automatic setup and a unique "clustering" capability that allows multiple product types to be run without changing settings for maximum uptime. The **PowerPhasePRO Select** offers the additional capability of custom frequencies for ultimate sensitivity to your specific product. Both systems offer unmatched detection of all types of metal contaminants, including the difficult-to-detect stainless steel.

The compact **Gravity Flow** metal detector inspects continuous product flow of bulk powder. Its compact design allows easy integration into limited spaces and its low-pressure diverter valve minimizes product loss during contamination removal regardless of the product volume or flow for maximum profits.

**METTLER TOLEDO**

## METTLER TOLEDO Product Inspection

### Express

The **Pipeline PRO** metal detector is constructed from heavy gauge stainless steel to stand up to extreme processing and heavy wash down environments. The patented design makes cleaning fast and easy for more uptime on processing lines.

The **Tablex PRO** pharmaceutical metal detector zeros in on tramp metal from broken screens, sieves, worn punches, dies or bulk raw materials and automatically rejects the contaminated pharmaceutical tablets and capsules for ultimate brand protection. Maximizing flexibility, this detector utilizes a unique triple axis detection head that offers tool-free adjustment to fit any press output configuration.

### Safeline X-ray Inspection Systems

The **PowerChek Plus** x-ray inspection system is designed for a wide variety of inspection applications. It reliably detects physical contaminants and also automatically scans for missing or broken product, detects package voids, and confirms fill levels to guarantee product and package integrity.

The **Certus XR** x-ray inspection system is a cost-efficient yet robust solution to x-ray inspection. Ideal for small packaged products in non-washdown applications, it is simple to operate and clean, and offers USB connectivity.

### Hi-Speed Checkweighers

The **Cornerstone** checkweigher features the largest IP69K user interface on the market making it ideal for wet or harsh wash down environments. The easy to learn, multilingual color touch screen is simple to operate for fast product set-up and change over ensuring more uptime performance. "No-tool" belt change out speeds up maintenance, reduces downtime, and increases overall productivity.

The **Beltweigh XC** checkweigher is a durable, dependable and economical solution for in-line weighing. The compact design fits easily into production lines, and the all-welded stainless steel frame is built to last and easy to maintain.

METTLER TOLEDO is the world's largest manufacturer of metal detectors, x-ray inspection systems and checkweighers. Our comprehensive portfolio is supported by the most comprehensive engineering solutions, product testing, customer service and training in the industry.

#### METTLER TOLEDO Safeline

6005 Benjamin Road, Tampa, FL 33634  
Toll Free: 800-447-4439  
Tel: 813-889-9500  
Fax: 813-881-0840  
E-mail: safeline.sales@mt.com

#### METTLER TOLEDO Hi-Speed

5 Barr Road, Ithaca, NY 14850  
Toll Free: 800-836-0836  
Tel: 607-257-6000  
Fax: 607-257-5232
